Baanza Academy · Learn and Earn

Know your units

Kilograms, tonnes, litres and pieces. Keep this page with your scale.

kg · Kilogram

Most recyclables: PET bottles, cans, paper, nylon, scrap metal.
1 kg = 1,000 g. Price per kg × kg = money.

tonne

Big loads. 1 tonne = 1,000 kg.
Price per tonne ÷ 1,000 = price per kg. Always ask: “1,000 kg?”

litre

Used cooking oil and used engine oil. A litre is space, not weight: 25 L of cooking oil weighs about 23 kg. Clean, sealed, labelled containers.

piece

Car and inverter batteries, many electrical items, some scrap.
Count, write the count, agree the price per piece. Batteries go through a Baanza Pro.

The rule. Before any deal, ask: “What unit is your price in?” Per kilo, per tonne, per litre or per piece. Then measure in that same unit. Never mix them.

Quick check. ₦250,000 per tonne ÷ 1,000 = **₦250 per kg** (example price).
